Message from the Guest Editors

The growing challenges of societal sustainability, social complexity, behavioral operations research and cohesion are becoming more and more acknowledged in the scientific community. Application of computational models to study issues of creativity processes in the social systems has been undergoing rapid development lately.

A special issue with contributions presented at the EU- RO Mini Conference “Modelling and Simulation of Social-Behavioural Phenomena in Creative Societies” (MSBC-2019) will be published in a top-rated journal “Creativity Studies”.

The issue aims to highlight and explore some of the more recent theoretical and practical advances in the field of modelling and simulation of creativity processes in social systems.

We invite those who attended MSBC-2019 to submit their article prepared as standard scientific paper (up to 25 pages). Each submitted article will be rigorously evaluated following the revision process normally applied. This process will be based on assessing the originality, significance, technical soundness, clarity of exposition, and relevance to the theme of the issue.

Schedule:

- September 18-20, 2019 – Conference
- November 10, 2019 – Full Paper Submission
- January 5, 2020 – Final Decision Notification
- Mid-2020 – On-line Publication of the Feature Issue

Prospective authors may send their full papers (up to 25 A4 pages) via EasyChair.
